MLB Net Profit by Team 2010 - 2017

By MTi Sports Forecasting

The table below gives the net profit or loss when betting on a particular MLB team for an entire regular season. The results are given for each of the last eight years with ten cent lines.

Team	2010	2011	2012	2013	2014	2015	2016	2017
Angels	-$942	+$54	-$866	-$2,059	+$2,034	+$364	-$827	+$203
Astros	+$758	-$3,497	-$3,339	-$2,761	-$23	-$262	-$780	+$1,247
Athletics	-$78	-$1,580	+$3,761	+$1,926	-$1,622	-$3,147	-$1,410	-$376
Blue Jays	+$1,310	+$138	-$1,330	-$1,013	+$118	+$813	-$833	-$1,671
Braves	-$209	-$472	+$1,644	+$914	-$1,846	-$1,505	+$501	-$335
Brewers	-$762	+$1,958	-$976	-$696	-$741	-$1,952	-$51	+$1,684
Cardinals	-$2,226	+$154	-$501	+$1,116	+$223	+$1,867	-$706	-$906
Cubs	-$1,760	-$1,476	-$2,675	-$1,592	+$2	+$1,800	+$499	-$1,315
Diamondbacks	-$2,430	+$2,685	-$1,083	-$445	-$2,980	+$596	-$1,988	+$1,550
Dodgers	-$1,272	+$64	+$71	+$370	+$803	-$1,072	-$599	+$1,064
Giants	+$1,155	-$589	+$1,762	-$2,145	+$512	-$1	-$785	-$3,628
Indians	-$620	+$143	-$2,085	+$2,455	+$286	-$1,204	+$995	+$468
Mariners	-$3,825	-$2,308	+$141	-$1,683	+$296	-$1,910	+$74	-$911
Marlins	-$330	-$1,403	-$2,509	-$1,322	-$23	-$1,223	-$625	-$646
Mets	-$685	-$109	-$1,291	-$474	+$288	+$712	-$829	-$3,055
Nationals	-$1,015	+$1,118	+$2,267	-$767	+$1,031	-$2,160	-$14	+$762
Orioles	-$100	-$505	+$3,528	+$67	+$3,338	-$67	+$1,626	-$1,194
Padres	+$1,836	-$1,189	+$354	+$205	-$814	-$1,728	-$157	+$144
Phillies	+$848	+$1,006	-$1,671	-$2,173	-$503	-$1,060	-$199	-$1,149
Pirates	-$2,218	-$341	-$270	+$2,312	+$450	+$2,168	-$1,443	-$900
Rangers	-$395	+$1,084	-$527	-$431	-$1,845	+$2,610	+$2,742	-$213
Rays	+$255	+$790	+$607	+$178	-$2,497	-$610	-$2,858	-$588
Red Sox	-$410	-$1,538	-$3,730	+$1,808	-$2,483	-$571	+$98	+$295
Reds	+$1,319	-$1,511	+$1,667	-$550	-$1,091	-$2,972	-$791	-$1,485
Rockies	-$1,230	-$2,907	-$2,196	-$1,191	-$2,813	-$1,412	-$696	+$1,536
Royals	-$980	-$511	-$514	+$717	+$325	+$2,024	+$126	-$252
Tigers	-$219	+$1,755	-$1,219	-$1,244	-$474	-$1,031	+$1,010	-$2,812
Twins	+$1,230	-$2,550	-$1,213	-$821	-$666	+$1,926	-$3,104	+$903
White Sox	+$792	-$1,279	+$21	-$3,271	-$231	-$1,354	-$700	-$37
Yankees	-$745	+$796	+$398	+$471	-$256	-$465	+$361	+$478

A nice graphic showing these results is given on the facing page.

The average profit when betting a particular baseball team over an entire regular season is about minus four units using a ten cent line. Over a regular season, there will be a few teams that are able to overcome the "juice" and be profitable whereas others will be significantly below the break-even mark. In 2017, there were twelve MLB teams that produced a profit over the entire season. Of these, Cleveland, Boston and the Yankees were the only ones that also produced a

Net Profit vs Season
MLB Teams 2010-2017
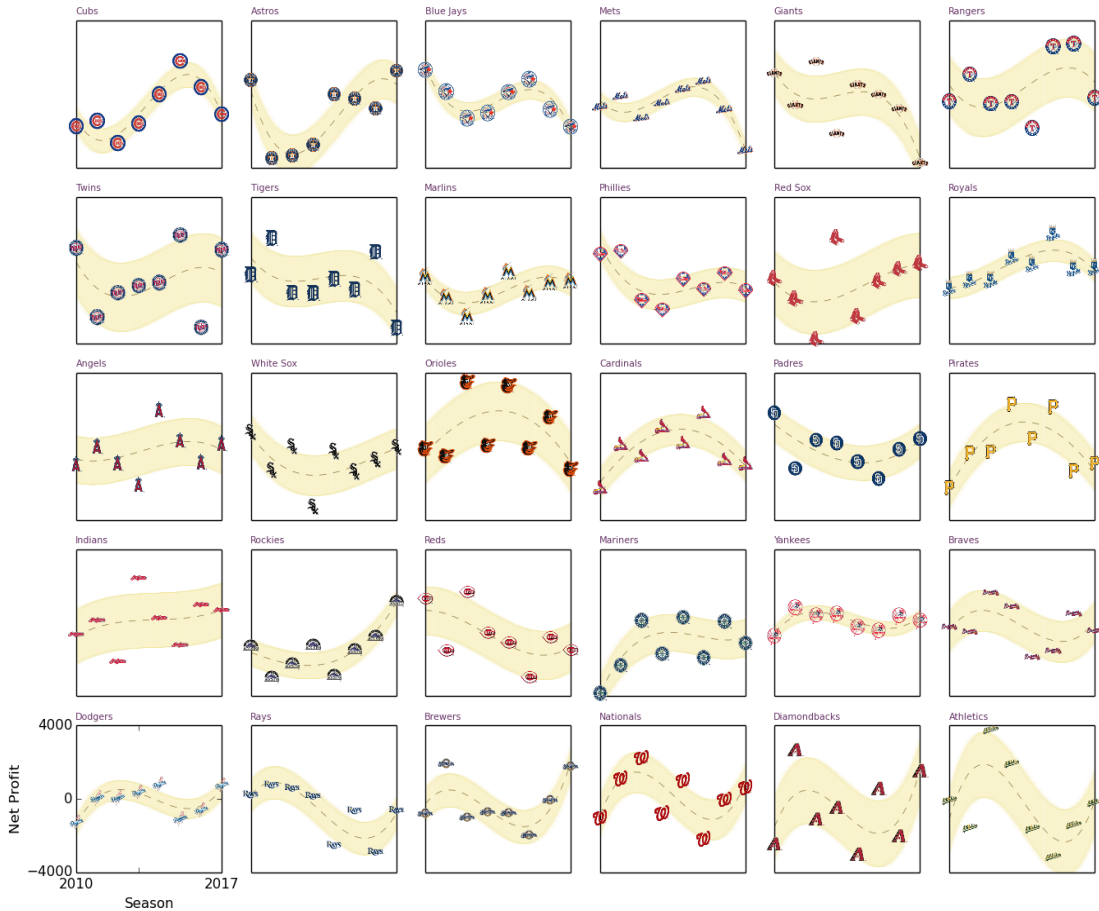

profit in 2016 as well and none of those three also produced a profit in 2015. In 2016, there were only nine teams that were plus-money, and in 2015 there were ten.

Over the last eight seasons combined, the biggest winner has been the Baltimore Orioles. They have a regular season record of 654-642 and they were an average of +108.7 on the moneyline for a net profit of 66.93 net units. The Rangers are second with a record of 698-599 at an average line of minus 116.5 to produce a net profit of 30.25 net units. The Rangers are followed by the Nationals, which have produced a net profit of 12.22 net units this decade.

It is interesting to note that the Orioles have been the most profitable UNDER team this decade, going 583-659-50 OU for a net profit of 16.24 net units when going under the total.

Agile Access to Sports Data

Despite the Rockies' excellent profitability in 2017, they remain the worst team to bet over the entire decade. Betting on the Rockies in every regular season game this decade would have resulted in a net loss of 109.09 net units and playing against them would have resulted in a net profit of 49.17 net units. The second biggest money-burner this decade has been the Mariners, which were 602-694 at an average line of +102.1. This produced a net loss of 101.26 units betting on them and a profit of 39.37 units playing against them.

The Astros had a stretch of three terrible seasons in a row from 2011-2013 and they are still trying to make up for it. Houston was very profitable last season, but they only moved up to third-worst this decade as a result. Since 2010, betting on the Astros would have resulted in a net loss of 86.57 net units and playing against them would have resulted in a net profit of 21.57 net units.

The Marlins are the only team in the entire table that has produced a losing season on the moneyline in all eight seasons. They are certainly unlikely to be overrated this season.

The most profitable season in the entire table was that produced by the Athletics in 2012. Oakland went 94-68 and they were an average of +109.4 on the moneyline for a net profit of 37.61 net units. Fifty-seven of their 94 wins came as an underdog that season. Note that the public thought that A's 2012 season was a fluke, because Oakland produced a terrific profit in 2013 as well.

The next two most profitable seasons this decade were by the same team. The Orioles produced 35.28 net units in 2012 and 33.38 net units in 2014.

The worst season this decade was the Mariners' 2010 season. They finished 61-101 while averaging +116.6 on the moneyline for a net profit of 31.55 net units when against them. They are followed by the 2012 Red Sox, which finished 69-93 laying an average of 108.5, which produced a net profit of 30.04 net unit for those fading the Red Sox the entire season. The third best team to play against this decade was last season's Giants, which were 65-97 at an average of +109.8 on the moneyline, which was good for 28.22 net units when betting against them.

Who will be the big winners and losers this season? How agile will the bettors be when a team turns out to be significantly better or worse than forecast? Stay tuned!

Walk-Off Winners with Momentum

By Charlie's Hustle @CharliesHustle2

The Strategy: Play on home favorites off a walk-off win in which they scored first and it is not a series opener.

These teams are 140-67 straight up producing a net profit of +44.14 net units and an ROI (return on investment) of 13.9%. On the run-line they were 106-100 at an average line of +144.1 for a net profit of 47.82 net units and an ROI of 23.0%.

The SDQL: season>=2013 and HF and p:WOW and p:SF>=1 and SG>1

Biggest SU Slump: -12.31 net units from July 2nd 2016 through April 16, 2016

Biggest Run-line Slump: -13.40 net units from September 20th, 2013 to June 25th 2014

Strongest SU Streak: +23.67 net units from June 11th 2015 to June 25th 2016

Strongest Run-line Streak: +22.0 net units from April 20th 2017 to July 28th 2017

Recommendation: 1.5% of bankroll. By doing so your max drawdown should be about 20% of bankroll and max upside around 35% of bankroll. Do not chase, play either the money line or the run-line, but not both.

For more insightful analysis that is supported with the SDQL, follow Charlie's Hustle @charlieshustle2 on twitter.

Editor's Note: A number of professional handicappers have adopted the SDQL to perform research involving historical sports data. However, the expertise of many professional sports handicappers is not the analysis of data, it is marketing. The real penetration of the SDQL has been into the financial sector as tech traders in Singapore, Taiwan, Switzerland, New Zealand, Croatia as well as the United States are quickly mastering the SDQL and using it to uncover inefficiencies in the sports betting market.

When choosing a professional to pay for sports betting advice, it seems prudent to select someone that invests a lot of time analyzing the data and knows how to draw scientific conclusions rather than someone who spends a lot of time trying to convince people to pay for their selections.

Without the SDQL, You're Just Guessing.

A Closer Look at the 2017 MLB Regular Season with the Help of the SDQL

In 2017, the biggest loser on the moneyline was the San Francisco Giants, as they were minus 37.28 net units. Next were the Tigers at minus 31.27 net units and they were followed by the Mets at minus 30.55 net units. The best team to back in 2017 was the Milwaukee Brewers, which were +17.89 units, followed by the Diamondbacks at +15.50 units and the Astros at +12.67 units.

The Giants had a regular season win total of about 87.5 in 2017 and they went 65-97, tied for the Tigers for the worst record in the league. The regular season win total for the Mets was 89.5 and they won only 70 games. The Tigers were expected to win 85.5 games, but as we just mentioned they tied for the worst record in the league. It is interesting to note that the two worst teams in the league last season both were expected to finish well above 500.

It is also interesting to note that the public continued to have faith in the Giants throughout the season. San Francisco was the second most profitable team to bet against before the All-Star break and they were the third most profitable team to bet against after the All-Star break. Perhaps it is best to stop looking at the regular season win numbers as soon as the season starts and base your evaluation of any team solely on how the team is performing in the current season rather than how they were expected to perform before the season started.

Now let's take a closer look at the top money-makers in 2017. The Milwaukee Brewers, who finished the regular season with a record of 86-76 and were only expected to win about 72.5 games. Second was the Diamondbacks, who were 93-69 with a regular season win total of 78.5. Third was the Astros, who finished 101-62 when they were expected to win about 87.5 games.

Another team of interest in 2017 is the Chicago Cubs. They had a regular season win total of 95.5 and they went 92-70. It was actually profitable to play against them, at +2.92 net units because they led the league with regular season losses as a favorite with 58.

The Dodgers had the best record in the league last regular season at 104-58 and they were favored in a staggering 154 games. This is the highest number of games in which a team has been favored in a regular season in our entire database. The second most was the Cubs over the 2016 season which played 148 games as favorite.

In 2017, the Dodgers led the league in losses as a 200-plus favorite with 17. The Indians were second with 11 such losses.

The Rockies were the best investment as an underdog in 2017, going 38-37 for a net profit of 13.89 units.

The most profitable team as a home dog in 2017 was the White Sox, who went 34-36 at an average of +152.3 on the moneyline which produced a profit of 10.44 net units. The Tigers, on the other hand, were 9-28 as a home dog in 2017, for a league worst minus 17.82 units.

As a home favorite the Brewers were 30-12 (71.4%) in 2017, which not only was the most profitable, it was the highest winning percentage in the league as a home favorite. The Dodgers were close behind at 71.2%, but the Dodgers were laying an average of 219.6 as a home favorite in 2017 whereas the Brewers were an average of minus 137.5 when favored at home.

The Blue Jays produced the greatest net loss as a home favorite over the 2017 regular season, going 30-30 at an average of minus 147.1 on the moneyline. Ouch.

The Indians were a nice 47-30 as a home favorite in 2017, but they were an average of minus 196.1, making them the fourth worst play as a home favorite in 2017. It's not that the Tribe was not good as a home favorite, they were just overpriced as a home favorite.

There was only one team in the league that did not suffer a single loss as a road favorite in 2017 - the Chicago White Sox. They were 1-0, winning 9-0 as a 118 road favorite in Minnesota with Jose Quintana. The Athletics were a very reliable 7-1 as a road favorite in 2017 and the Twins were an impressive 15-4.

The most profitable team to bet as a road favorite in 2017 was the Houston Astros, who were 46-18 (71.9%) laying an average of 141.0 for a net profit of 19.24 units. The Nationals were second at 34-16 (68.0%) and the Indians were the third in the money won column as road chalk at 45-24 (65.2%) in 2017, which resulted in a plus 10.30 net units.

The Giants, Tigers and Orioles were all terrible as road favorites. San Francisco was 6-14, the Tigers were 3-13 and the Orioles were 6-12.

The Yankees were a road favorite 43 times over the 2017 regular season, laying an average of 140.3. They were 21-22 for a net loss of 7.2 units, fourth worst in the league.

The biggest money-burner in the league over the 2017 regular season as a road dog was the Athletics, which went 21-48 costing their backers 19.60 net units. The Giants second-worst at 19-39 for minus 15.25 net units and the Phillies next at 25-52, losing 14.34 net units.

The Sports Data Query Language

KillerSports.com

Agile Access to Sports Data

Now let's perform some research with the SDQL in an attempt to gauge whether a team was lucky or unlucky over the 2017 regular season. We'll start by looking at games decided by one run. From this point forward we'll present both the English text and the SDQL text of the query being performed.

English Text	SDQL Text
Listing of each team's results in games decided by one run over the 2017 regular season.	season = 2017 and team and REG and -1<=margin<=1

A graphic showing each teams winning percentage in one-run games over the 2017 regular season vs the number of one-run games they played is shown below.

Winning Percentage of One Run Games v Number of One Run Games
MLB teams in the 2017 regular season
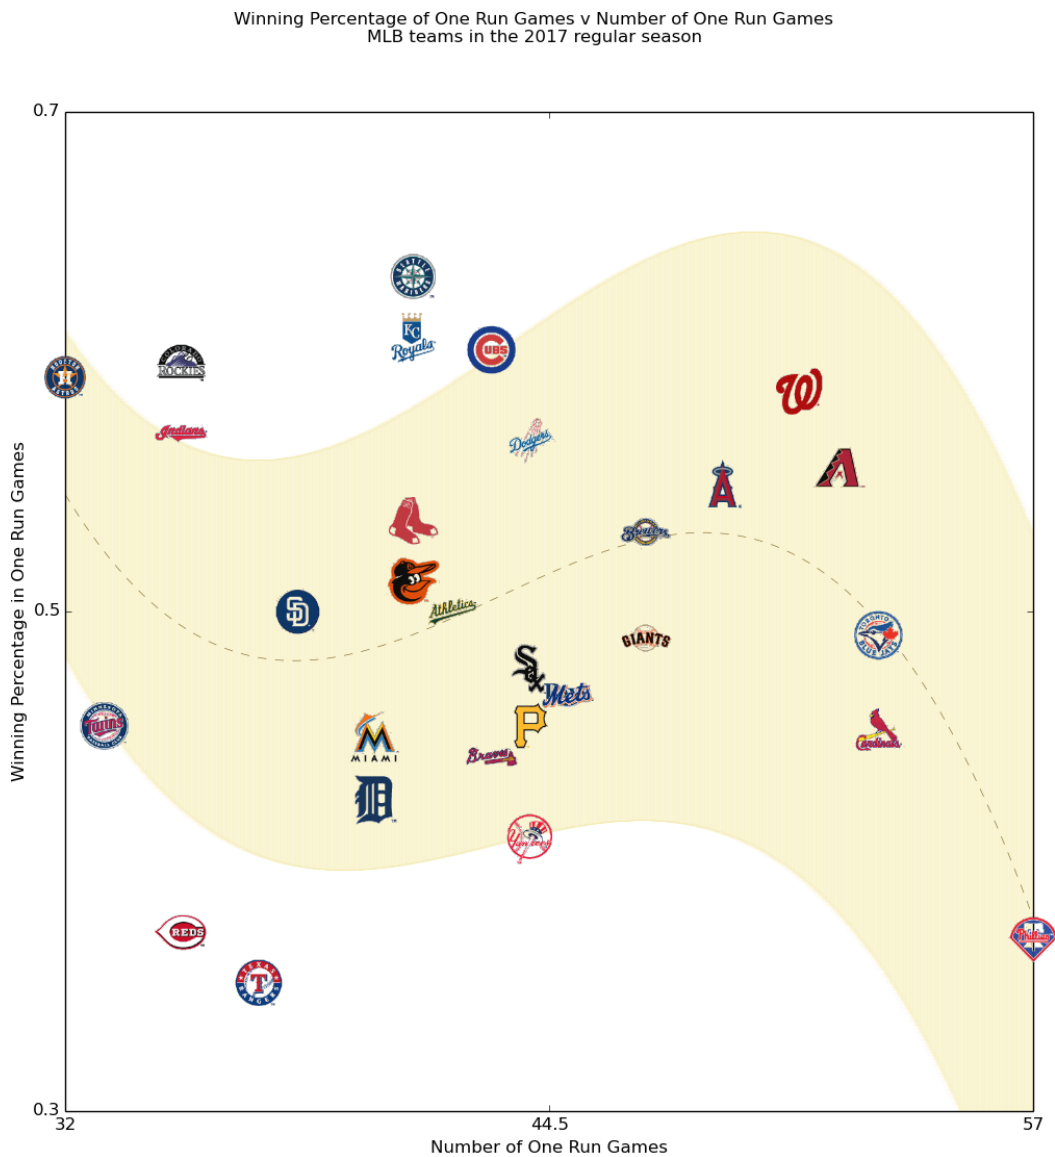

In games decided by one run, the Seattle Mariners had the best winning percentage, with a record of 26-15 (63.4%). The Royals were second at 25-16 (62.0%), the Cubs were third at 26-17 (60.5%), the Rockies were fourth at 21-14 (60.0%) and the Astros were fifth at 19-13 (59.4%).

The team were the worst record in one-run games over the 2017 regular season was the Rangers at 13-24 (35.1%). They were followed by the Phillies at 21-36 (36.8%). Philadelphia also had the highest number of one-run games at 57. In the third-worst spot was the Reds at 13-22 (37.1%) and they were followed by the Yankees at 18-26 (40.9%) and the Tigers at 17-23 (42.5%).

It is interesting to note that in 2016, the Rangers had the best record in the league in one-run games, going 36-11, so they went from best to worst over one year.

English Text	SDQL Text
Listing of each team's results in one-run wins over the 2017 regular season.	season = 2017 and team and REG and margin=1

The Rangers and the Reds only had 13 one-run wins in all of 2017. This was the fewest in the league. The Nationals had 30 one-run wins in 2017, the most in the league. They were followed by the Diamondbacks with 29. The Rangers won 78 games over the 2017 regular season, so the percentage of the Texans' wins that were by a lone run was only 16.7 and this was the lowest in the league. On the other hand, 35.4% of the Giants' wins were by a lone run and this was the highest in the league.

English Text	SDQL Text
Listing of each team's results in wins in which they never trailed over the 2017 regular season.	season = 2017 and team and REG and W and o:BL=0

The team that had the most wins in which they never trailed was the Cleveland Indians at 73. This is a record for the entire database. In the history of our database, no team has had as many as 73 regular season wins in which they never trailed. In 2017, the Rockies and Astros were a distant second at 58. The Dodgers had 57, the Nationals had 56 and the Brewers had 51. On the other end of the spectrum, we find that the Philadelphia Phillies only had 29 wins in which they never trailed in 2017, fewest in the league. The Tigers had 30 and the Giants and Royals each had 33.

English Text	SDQL Text
Listing of each team's wins in which their opponent led over the 2017 regular season.	season = 2017 and team and REG and W and o:BL>0

How about wins in which they trailed? In 2017, the Dodgers and Angels were tied on top with 47 wins in which they trailed, followed by the Royals, with 46 and the Cubs with 45.

English Text	SDQL Text
Listing of each team's results in losses in which they held the lead over the 2017 regular season.	season = 2017 and team and REG and L and BL>0

How about losses in which they led? The Milwaukee Brewers led this category with 50. The Giants and Phillies were tied for second 46, followed by the White Sox and Mets with 45.

English Text	SDQL Text
Listing of each team's results in wins in which they scored three or fewer runs over the 2017 regular season.	season = 2017 and team and REG and W and runs <= 3

The graphic below shows the number of games each team played in which they never trailed vs the number of games each team never led over the 2017 MLB regular season. The Indians were the dominant leader in this category.

Number of Games the Team Never Trailed vs Never Led
MLB teams in the 2017 regular season
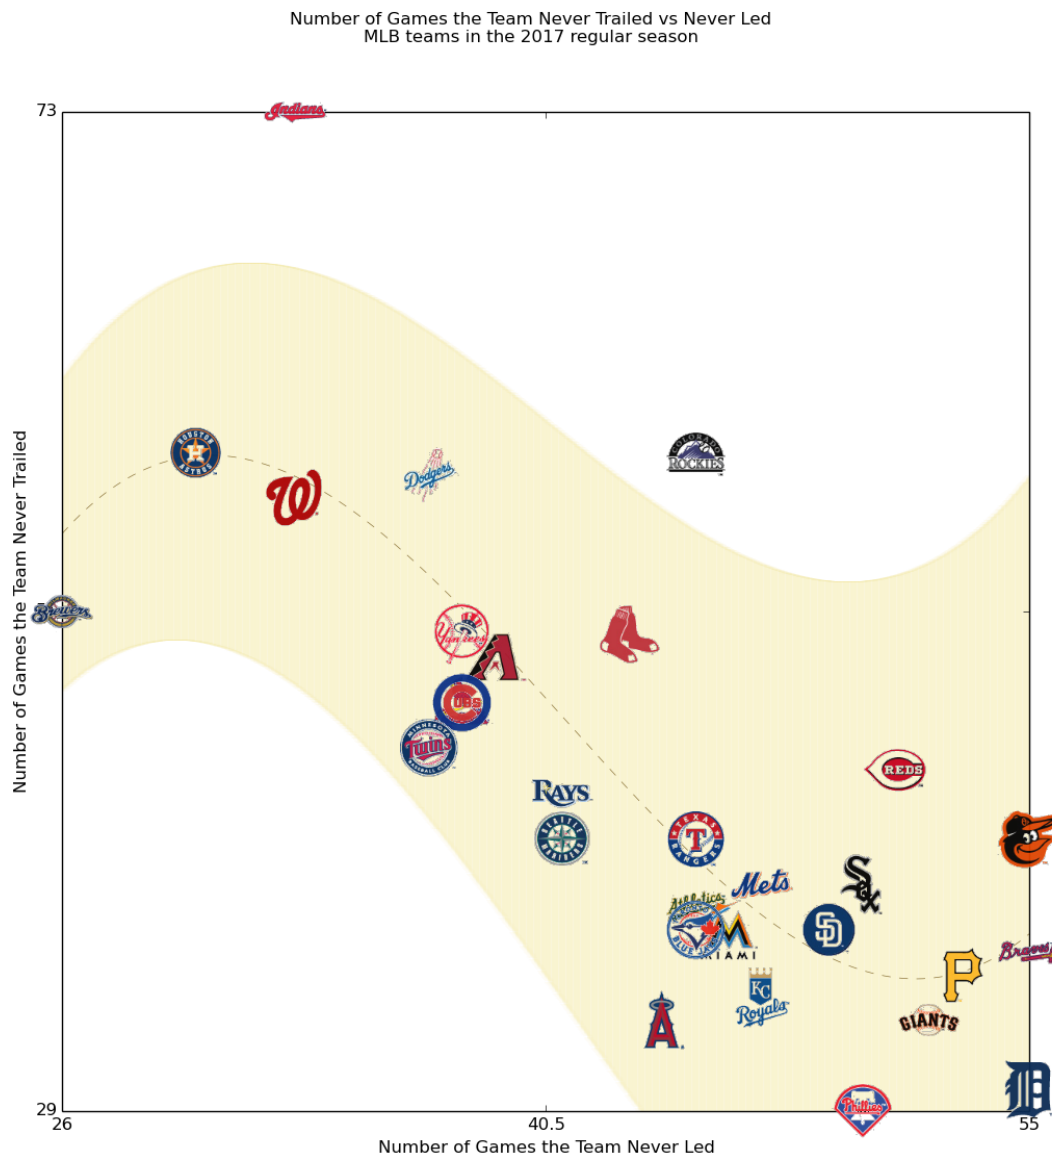

Next let's look at games in which a team scored three or fewer runs but won. In 2017, the Nationals has 23 such games, the Brewers and Diamondbacks each had 21 and the Dodgers had 19. Going to the bottom of the table, we see that the Tigers only had five wins in which they scored three or fewer runs, the Mets had six and the Mariners, Marlins and Rangers each had eight.

English Text	SDQL Text
Listing of each team's wins in which they were outhit over the 2017 regular season.	season = 2017 and team and REG and W and hits < o:hits

There is so much you can do with the SDQL, so let's keep doing it. How about wins in which they were outhit? The Pirates and Dodgers are tied with the most at 23 games with the Tigers and Angels tied at third with 20. The teams with the fewest wins in which they were outhit were the Astros and Braves, each with only eight games. Houston is at the bottom because they outhit their opponent most of the time and the Braves are with them because they simply did not have a lot of wins.

English Text	SDQL Text
Listing of each team's games in which they outhit their opponent over the 2017 regular season.	season = 2017 and team and REG and hits > o:hits

In fact, the Astros outhit their opponent in 102 game last regular season to win this category. The Yankees were second with 94, followed by the Indians with 92 and the Nationals with 91. Cleveland had the best winning percentage when they outhit their opponent, going 85-7 (92.4%) The Tigers were the trailer in this column, with only 59 games in which they had more hits than their opponent in 2017.

English Text	SDQL Text
Listing of each team's games in which they had more left on base than their opponent over the 2017 regular season.	season = 2017 and team and REG and LOB > o:LOB

Let's shift our focus to the left-on-base category. Over the 2017 regular season, the Yankees led the league in games in which they stranded more runners than their opponent with 93. They were followed by the Indians, with 90, the Dodgers with 89, the Diamondbacks with 88 and the Cardinals and Angels each with 85. The Rangers are in last in the league in this category with only 65 games in which they had more men left on base than their opponent.

English Text	SDQL Text
Listing of each team's results in games in which they had fewer left on base than their opponent over the 2017 regular season.	season = 2017 and team and REG and LOB < o:LOB

In games in which the team had fewer left on base than their opponent in 2017, the Dodgers had the best winning percentage with a record of 38-27 (58.5%), the Yankees were second at 35-26

in these games, for a winning percentage of 57.4 and the Nationals were third with a record of 340-38 (51.3%). The Giants were dead last in this column at 24-51 (32.0%).

English Text	SDQL Text
Listing of each team's results in walk-off wins over the 2017 regular season.	season = 2017 and team and REG and WOW

Finally, before we look at some pitching stats, let's check out the walk-off-win numbers. The team with the most walk off wins over the 2017 regular season was the Orioles with a dozen. They were followed by the Athletics with 11 and the Red Sox, Pirates and Dodgers each had 10. The teams with the fewest walk-off wins in 2017 were the Astros and Padres, each with only three. In 2016, the Astros had ten.

English Text	SDQL Text
Listing of each team's results in walk-off losses over the 2017 regular season.	season = 2017 and team and REG and o:WOW

To complete this investigation, let's look at walk-off losses. Over the 2017 regular season, the Blue Jays suffered a league-high 15 walk-off losses. The White Sox were second with 11, the Giants were third with 10, and the Mets, Phillies, Padres and Brewers each had 9. The Cubs suffered the fewest with only 3 walk-off losses in 2017.

English Text	SDQL Text
Listing of each team's results in games in which their starter had a quality start over the 2017 regular season.	season = 2017 and team and REG and QS

Now let's shift our focus to pitching. The team with the most quality starts over the 2017 regular season was the Nationals and it was not close. Washington's staff produced 99 quality starts. Second was the Red Sox with 88 and the Indians were third with 84. In fourth place was the Giants with 82. These four were the only teams whose starters produced quality starts in more than half their games. The record for the number of quality starts in a regular season in our database is the 2014 Braves with 110. Unfortunately, they couldn't hit and finished 79-83.

The Reds' starters produced only 54 quality starts in 2017 and this was lowest in the league. The Marlins were second-lowest at 55 and the Twins were third from the bottom with only 58. Minnesota did very well in these games, going 47-11 for the third highest winning percentage in games in which their starter produced a quality start, behind only the Dodgers and Yankees.

English Text	SDQL Text
Listing of each team's results in games in which their starter had a quality start over the 2017 regular season.	season = 2017 and team and REG and o:QS

It seems natural to continue the interrogation of the 2017 MLB results by looking at the number of times the opponent's starter had a quality start.

The SDQL defines a trend precisely and enables the TrendMart.

12

The Yankees only allowed 52 quality starts against them in 2017, lowest in the league. They are followed by the Twins with 53 and the Rockies with 55. The team that the most quality starts against them in 2017 was the San Diego Padres, with 90. However, the ballpark in which they play is a contributing factor.

The graphic below shows the number of opponent's quality starts vs the number of quality starts for each team over the 2017 MLB regular season.

Number of Opponent Quality Starts vs Number of Quality Starts
MLB teams in the 2017 regular season
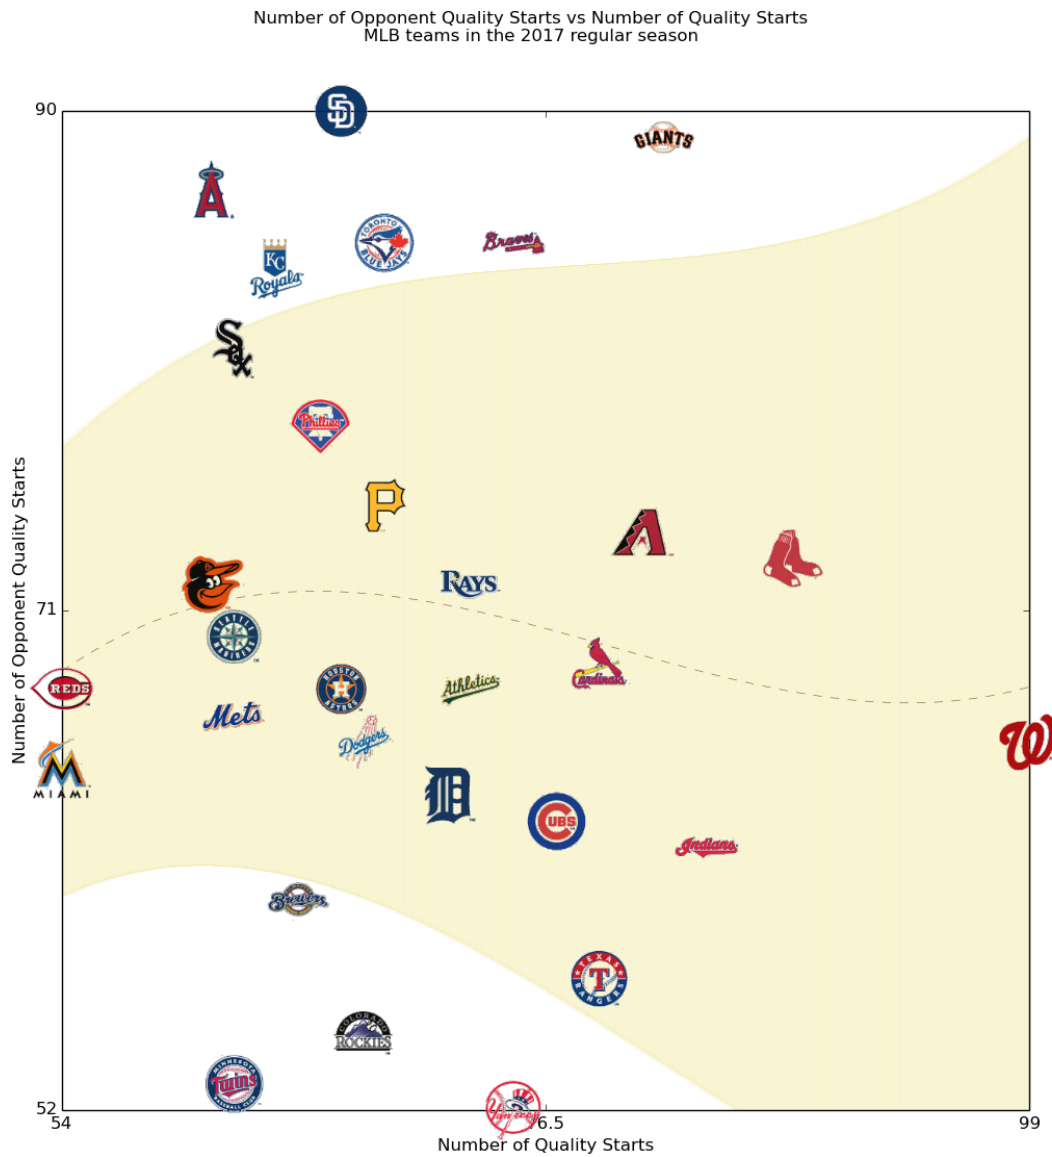

There is a wide range vertically but horizontally the Nationals were easily the best-in-league.

English Text	SDQL Text
Listing of each team's results in games in which their starter had at least ten strikeouts over the 2017 regular season.	season = 2017 and team and REG and SSO >= 10

The Indians and Nationals led this category with 25 games in which their starter got to double-digit strikeouts. They were followed by the Red Sox with 20, the Diamondbacks with 19 and the Dodgers with 15. The Twins, Pirates, Angels, Padres and Braves we tied for second worst in this category with only two games in which their starter had double-digit strike outs.

Can you perform the query to rank the MLB teams in number of games in which the opponent's starter had 10-plus strikeouts? If so, you can answer the question, "Which MLB team only had one game in which their opponent's starter had ten-plus strikeouts and who was that starter?

Of course these stats will be useful to follow over the 2018 season. The MLB tables at KillerSports.com will provide a lot of fresh rankings in numerous categories. The URL for the MLB table page is

http://killersports.com/mlb/tables

These tables are fully queryable and fully rankable, as is explained in the next article.

Sports Data Query Language, visit SDQL.com

Rankable and Queryable MLB tables
at KillerSports.com

The tables page at KillerSports.com is not only rankable, it is queryable as well. In this article we present some of the table and describe how to rank and query them. The website address for the KillerSports.com MLB Tables page is:

http://killersports.com/mlb/tables

The default table is the "Records" Table, a screen shot of which is shown below.

Records	team	@	season=2017

Wins	Losses	$ On	$ Against	query
64	98	-3717	2925	Giants and season = 2017
64	98	-3121	2416	Tigers and season = 2017
66	96	-1154	408	Phillies and season = 2017
67	95	-32	-810	White Sox and season = 2017
68	94	-1468	814	Reds and season = 2017
70	92	-3052	2394	Mets and season = 2017
71	91	434	-1267	Padres and season = 2017
72	90	-421	-381	Braves and season = 2017
75	87	-187	-459	Athletics and season = 2017
75	87	-1191	553	Orioles and season = 2017
75	87	-892	196	Pirates and season = 2017
76	86	-1770	1000	Blue Jays and season = 2017
77	85	-533	-114	Marlins and season = 2017
78	84	-1100	467	Mariners and season = 2017
78	84	-199	-531	Rangers and season = 2017
80	82	-583	-204	Rays and season = 2017
80	82	213	-1004	Angels and season = 2017
80	82	168	-933	Royals and season = 2017
83	79	-914	283	Cardinals and season = 2017
85	78	1024	-1664	Twins and season = 2017
86	76	1797	-2495	Brewers and season = 2017
87	76	1116	-1963	Rockies and season = 2017
94	72	1353	-2086	Diamondbacks and season = 2017
94	72	221	-953	Red Sox and season = 2017
96	76	-1253	406	Cubs and season = 2017
98	77	279	-1127	Yankees and season = 2017
99	68	477	-1250	Nationals and season = 2017
104	63	508	-1364	Indians and season = 2017
112	68	1676	-2357	Astros and season = 2017
114	63	1179	-2042	Dodgers and season = 2017
2468	2468	-11142	-11142	League and season = 2017

Showing 1 to 31 of 31 entries

Before the 2018 season starts, the default in the text query box to the far right will be:

season = 2017

After the season starts the default season will be set to 2018. If you are reading this after the 2018 season started and want to follow along with the presentation here, we recommend changing the default season back to 2017 by clicking in the query text box and replacing the 8 with a 7.

 This table is rankable by any of the columns. To perform a ranking, simply click on the header of the column. To rank the teams by their name in alphabetical order, click on the word "query" on the top of the column to the far right. Try it. Rank the table by any column that you like.

Note that there is a row for league, which is the cumulative results for the entire league.
There are currently seven tables available at Killersports.com. If you have suggestions for more, please post them at the official Google discussion group for SportsDataBase at:

https://groups.google.com/forum/#!forum/SportsDataBase

Each of the tables can be accessed with the drop-down menu on the far left above the table. Click on the menu to reveal the other choices.

MTi Sports has been beating NFL teasers for 25 years.

The next menu has two options, "team" and "opponent." The default is team, but there are situations in which the opponent's results are desired. For example, if you wanted to know which team has allowed the most quality starts or allowed the most home runs.

The third drop-down menu gives differences. There are three options here: "team minus opponent," "Favorite minus underdog," and "home minus away."

The table entries here are the *differences*. For example, the "fav-dog" option give the differences in every entry in the table between the favorite numbers and the away numbers. The Dodgers, for example, were 109-56 (+1328 playing on and -2146 playing against) as a favorite and 4-7 (-249 playing on and +209 playing against) as an underdog in 2017. The favorite minus underdog differences for the Dodgers will be:

Wins   Losses $ On $ Against
105   49   +1577   -2355

There are a couple of thing to note here. The data include the playoffs and that there are games in which a team is neither the favorite or the underdog and these games, when the line is pickem, will not appear in the favorite minus underdog rankings.

To get the regular season results only, change the SDQL text to read:

season=2017 and REG

Another difference choice is "home - away" option. This gives the team's result at home minus the team's results on the road.

Ranking this table by the "Wins" column reveals that the Orioles and Athletics each had 17 more wins at home than they did on the road in 2017. This was tops in the league. At the other end of the table, we see that the Nationals, Twins and Indians were the only three teams in the league in 2017 that won more games on the road than they did at home.

The difference tables will provide the opportunity to capitalize on a team's performance dichotomies before the public and linesmakers catch up.

The third option for the differences is "team minus opponent." This is not a useful choice for the Records table, but it is very useful for others and we will look at some of those. But first, let's investigate the Records table a bit more.

Let's say you wanted to rank every team's record in 2017 when their starter had a quality start. The SDQL you need in the text box is:

season=2017 and QS

To generate this table, click on the SDQL! button after entering the above query text.

Doing so and ranking by the **$ On** column reveals that the Yankees generated the most profit in 2017 when their starter produced a quality start with a record of 65-15 for a net profit of 49.92 net units.

To see every team's record when their starter did not have a quality start, the SDQL text is:

season=2017 and NQS

Here we see that the Yankees were 33-62 when their starter did not produce a quality start in 2017 for a net loss of 4713, and only the Giants, Tigers and Mets were worse.

The possibilities here are virtually endless. Another example is after a one-run loss. The SDQL is:

season=2017 and p:margin = -1

In 2017, the Red Sox produced the most profit after a one-run loss, going 14-5 for a profit of 1022 and the Athletics burned the most cash, going 6-15 for a net loss of 962.

How about in games in which they did not hit a home run? The SDQL text is:

season=2017 and HR=0

Running this reveals that the Dodgers lost more money that any team when they were homerless, going 14-32 for a net loss of 3972. You can get to the records summary and game listing by clicking on

Dodgers and season = 2017 and HR = 0

Doing so reveals that LA was an average of minus 180.1 in these 46 games.

Of course, we could fill up this book with examples. We will list a few here.

When they are playing at home in 2017.
season=2017 and H

When they are off a loss in 2017.
season=2017 and p:L

When they are off two losses in 2017.
season=2017 and p:L and pp:L

When they scored exactly four runs in 2017.
season=2017 and runs=4

When they did not draw a walk in 2017.

season=2017 and walks=0

When they had at least ten hits in 2017.
season=2017 and hits >= 10

When they outhit their opponent in 2017.
season=2017 and hits > o:hits

When their starter went 7+ innings in 2017.
season=2017 and SIP>=7

When they struck out ten-plus times in 2017.
season=2017 and SO>=10

You are only limited by your imagination and baseball knowledge. Before we move on to another table, note that there is no limit to the number of parameters you can specify and that there is no limit to the date range.

For example, if you wanted to know each team's record in May of 2010, the query is

season = 2010 and month = 5 and team

Or if you wanted to know, for some reason, each team's record in the history of the database in the first game of a road series when they had more strikeouts than hits, the SDQL text is:

season = 2010 and A and SG=1 and SO>hits

Finally, as promised, let's look at some team minus opponent differences. To see the usefulness of this choice, select the "Offense" table. The first column here is "hits." By ranking this column, we can see that the Astros outhit their opponent by an average of 1.57 hits per game in 2017, tops in the league. The Yankees were second at 1.32, followed by the Nationals at 1.05 and the Indians at 1.03. On the other end of the table, we find the Padres, which were the only team to be outhit by an average of more than one hit per game, at 1.02.

In the HR column, the Diamondbacks had the highest differential over the 2017 season, averaging 0.34 more home runs per game than their opponent. The Yankees were second with 0.31 and the Astros were third with 0.30. The Giants were dead last averaging 0.37 fewer home runs per game than their opponent in 2017.

Finally, let's look at the ODP column, which is offensive double plays. The Red Sox led this category with 0.24 MORE double plays per game than their opponent in 2017. The Yankees were second at 0.22 and the Royals and Giants each had 0.20.

The Padres were the standout winner here, as they hit into 0.37 FEWER double-plays than their opponent in 2017. A contributing factor here is simply that they did not have that many men on base.

If you are clever, and you have some knowledge of the SDQL, you should be able to run some fascinating queries that have never been run before. If you find something interesting, please tweet it out and post it to the SportsDataBase Google Group.

Growth Factor vs F for 5-cent Pick-em Lines

Dr Edwin F Meyer, MTi Sports Forecasting

Most sports bettors have a "regular" job and the money they bet on sports is part of their entertainment budget. They bet an amount they feel is appropriate for the confidence they have in their selection and their current state of their entertainment budget. When serious bettors make an investment, they determine the appropriate amount to risk based on rigorous financial management principles. The graphic on the facing page gives the growth factor vs fraction risked, F, for a wager in which the bettor is laying 105 to win 100 for a range of winning percentages from 52% to 60%.

The peak in the curve is the optimal fraction. For example, we can see that the optimal fraction of your bankroll to risk is about 18% if the probability of winning is 60%. That is, risking 18% will optimize bankroll growth. The growth factor for a single 60% wager is just under 1.57% of the bankroll. To see how this is determined, consider a $1000 bankroll. The optimal fraction to risk is 18%, which is $180. This investment will win and return 20/21 of $180 60% of the time and the investment will lose $180 40% of the time. The growth factor is;

$$GF = (1 - 0.18)^{0.4} \left[1 + \left(\frac{20}{21} \right) 0.18 \right]^{0.6} = 1.015675$$

This is for a single wager. For 100 such wagers, the terminal wealth relative (TWR) is

$$TWR = GF^{100} = (1.015675)^{100} = 4.737$$

So, if a bettor makes 100 investments that each have a 60% chance of winning and he/she risks the optimal fixed fraction of 18%, the better will multiply his/her bankroll by 4.737. If the bettor starts with $1000, he/she will have $4737.

The optimal F for 55% winners is about 7.5% of the bankroll. Here the growth factor is

$$GF = (1 - 0.075)^{0.45} \left[1 + \left(\frac{20}{21} \right) 0.075 \right]^{0.55} = 1.002867$$

This is for a single wager. For 100 such wagers, the terminal wealth relative (TWR) is

$$TWR = GF^{100} = (1.002867)^{100} = 1.332$$

Not surprisingly, a bankroll will grow a lot faster with 60% winners than with 55% winners. Not only are you winning more often, you are betting a significantly higher fraction of the bankroll.

Of course, it is a significant challenge to find 60% winners and the downfall of most bettors is to use the fraction for 60% winners when they only have a 52% chance of winning. This will destroy a bankroll.

MrEast is an SDQL Master and offers sports trends at the TrendMart.

19

The good news is that the graph below will allow recreational bettors to risk an amount closer to the optimal fraction without doing a lot of math.

Growth Factor vs F when Laying 105-100 for Winning Percentages from 60% to 52%
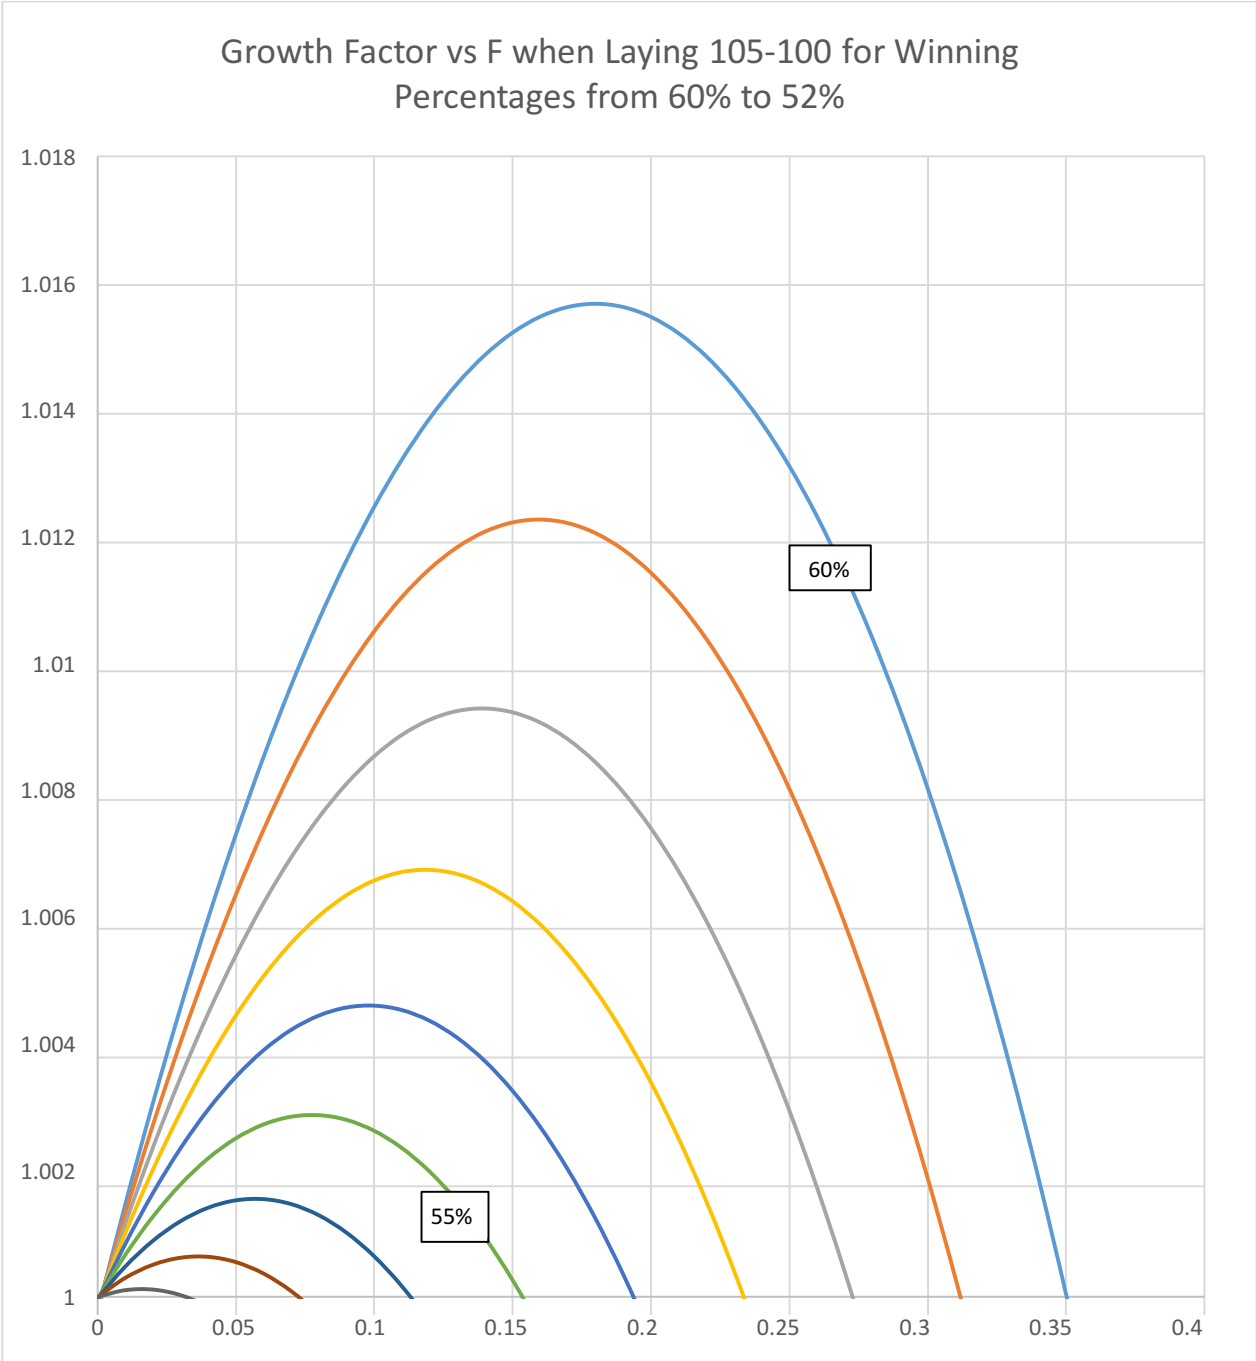

SportsBook Breakers' Study:
Starting a Series with a Rested Staff

Everyone recognizes that one of the most important things in baseball is how a pitching staff is set up. This includes quality, but also how rested a team's staff is going into the game. While everyone acknowledges the importance of this information, it is rarely referenced in baseball broadcasts, or even by professional handicappers. When the rest of a pitching staff is actually referred to, it is often in general baseball cliche terms, without performance context or data points. Thankfully, due to the power of the SDQL, we can easily investigate such situations and find out if there are any actionable results for bettors.

We want to look at how a team enters a series based on the rest of their pitching staff. Naturally, having pitchers and in particular a bullpen with more rest going into a series is a positive, but how valuable is it really? And is already being priced, or even overpriced into lines?

There are a couple of ways to judge rest, either by innings thrown or pitchers' used. For this, we like pitchers' used to identify the overall use of the team's staff as it helps determine the actual number of fresh pitchers a team has.

Using data spanning back to the beginning of the MLB database at Killersports.com in 2004, running a few simple SDQL queries we can easily investigate how recent pitcher usage affects a series opener's result. To begin with running this query, we need the SDQL for the series game which is just that *series game* or *SG* as a shortcut. And if we wanted to look at just how many pitchers a team used last game we would need the prefix *p:* to signify previous game and the parameter *pitchers used* or *PU*. When we

combine these and run the open-ended SDQL text SG=1 and p:PU, we generate the following chart:

Previous Pitchers Used	Record	Play On $	Play Against $
1	294-282 (51.0%)	$621	-$3,371
2	1053-1033 (50.5%)	-$4,568	-$6,291
3	2672-2732 (49.4%)	-$20,073	-$7,484
4	3332-3261 (50.5%)	-$7,633	-$25,219
5	2142-2179 (-49.6%)	-$13,152	-$8,377
6	912-922 (49.7%)	-$7,487	-$2,104
7+	413-417 (49.8%)	-$2,970	-$996

Well we did not find anything particularly actionable here. While teams that used just one pitcher last game do produce a small profit, it is just a 0.9% ROI and every other circumstance has not been profitable on either side of the bit. While it is not the hoped for result, it is better to know this as well so we are not fooled by misinformation in the future.

Of course, a pitching staff's rest is affected by more than just their last game. That's why it makes sense to look at how many pitchers a team used in multiple games. We like looking at their last three games, generally the length of a series, as that is a good estimate of the amount of time a pitcher is affected by having thrown an outing out of the bullpen, and certainly if they were used on multiple occasions. The SDQL is built to handle this question using the summation formula. The parameter, *tS(PU)* will sum up the amount of pitcher

appearances a team has had. Of course, that is the summation for the entire season which is not valuable or something to we want to look at. To adjust for this, we need to add to the parameter, making it *tS(PU, N=3)* with the *N=3* instructing the parameter to look at the team's past three games. Let's take a look at our new query of *SG=1 and tS(PU, N=3)*.

Previous Pitchers Used 3 Games	Record	Play On $	Play Against $
6-	93-72 (56.4%)	$1,773	-$2,411
7	198-173 (53.4%)	$1,893	-$3,777
8	461-456 (50.3%)	-$1,196	-$3,806
9	961-869 (52.5%)	$4,983	-$14,288
10	1475-1469 (50.1%)	-$7,565	-$6,984
11	1847-1882 (49.5%)	-$10,856	-$7,543
12	1886-1879 (50.1%)	-$7,770	-$12,116
13	1501-1582 (48.7%)	-$19,429	$4,019
14	1015-1101 (48.0%)	-$14,492	$4,316
15	672-640 (51.2%)	-$6	-$6,972
16	357-336 (51.5%)	$690	-$4,067
17	170-200 (45.9%)	-$4,546	$2,772
18+	158-149 (51.5%)	+$701	-$2,187

Now this chart is showing much more promise in an actionable scenario. And the

scenario that we were intrigued by rings true – that the pitching staff's rest is not being properly factored into the lines. In fact, it is really not being factored into the lines at all. When a team has used 18+ pitchers in their past three games entering a series, the average line is -105.5. When the team has used six or fewer pitchers in their past three games entering a series, the average line is -108.3, a negligible difference.

Because of that, the results go in a direction you might expect. When a team has used nine or fewer pitchers in the past three games, they are +1.8% playing on, and that is with nearly 3,300 active instances. And when a team had 13 or more pitcher appearances in their past three games entering the series, they are -0.2% playing against, trending in the direction that is logical to back this initial potential system. Of course, there are ways to fine tune this. To start with, it is only logical to at least eliminate duplicate entries in the results, where both teams enter having used nine or fewer pitchers. Running the SDQL *SG=1 and tS(PU, N=3)<=9 and oS(PU, N=3)>=10* accomplishes that and improves the result to +2.7% playing on. It seems logical there would be even more of an advantage gleaned when having a real significant pitching rest edge over the opponent, and that is indeed the case. When we bump up the criteria to look at games where the team has used nine or fewer pitchers the past three games, and the opponent has used 13 or more pitchers in their past three games, teams are 563-448 (0.39, 55.7%) and have produced an ROI for bettors of +8.7%. That marks a huge play on situation – one backed by logic and sound principles, with nearly 1,000 active instances.

A rested pitching staff does matter and if Vegas is not going to take note, then this a spot to take advantage of going forward.

Uncovering MLB Systems with the SDQL

By MTi Sports Forecasting

The baseball season is the most hectic of any major sport for a professional handicapper. There are usually 12-15 games to handicap every day. It would be very difficult to start at the first game on the schedule and do a thorough job of handicapping them one at a time. To perform the handicapping process efficiently, it is a good idea to start by focusing on the best opportunities on the schedule rather than the first game on the schedule.

There are a number of ways to do this and all involve preparing during the off-season. A great way to prepare is to uncover league-wide, multi-season systems that have produced a profit season after season and save them in your personal trend file at KillerSports.com. Imagine waking up each morning with a list of active systems for the day's games! It is a great way to start the daily handicapping process.

These systems act as a filter that reduces the teams that you are considering for a play. At MTi Sports Forecasting we have a set of about 150 baseball systems that are saved in our trend file. These league-wide, multi-season systems have produced a profit year after year and many of them have 2-5 active teams every day. These are real cash cows as the potential profit is huge. Of course, we can't publish the best ones here because they will get overplayed and we will lose our advantage. After all, the reason why they work is that the linesmakers don't know about them and we want to keep it that way.

Nonetheless we will reveal an "average" system that was saved in the winter of 2015 and worked well for us in 2016. We published it in this spot last season and it was +9.48 units in 2017. The system is to play on a team in the last game of a series when they are off a win in which they trailed and their bullpen allowed fewer than four runs. The SDQL text is:

LGS and po:BL > 0 and p:W and p:BPRA<4 and date >= 20120523

When we found this system it was 660-499 and had produced +113.45 net units. That is, it is 161 games above 500 and the team in this spot was an average of -117.4 on the moneyline.

In 2016, teams in this spot were 192-161 and they were only a 110.1 favorite on the average. This is 22.52 net units of profit (+2,252 when playing to win $100).

In 2017, AFTER we published the system in the 2017 Annual, this system was 179-155 (53.6%) and the average line was minus 117.3. The average line jumped considerably from the 2016 season to the 2017 season, but the system still made 9.48 units over the season. That is, a $100 bettor would have made a net profit of $948 playing this system over the season.

If you have a stable of these going into the season, you are in for a fun ride. The turnover in MTi's saved system file is surprisingly low. Every winter we add a few systems and delete a few that have not consistently won, but most remain.

If you are not interested in finding your own systems, there are a bunch of SDQL wizards selling their MLB systems at the KillerSports.com TrendMart. Prices and style vary significantly but all systems come with the SDQL and many of them come with complete explanations. If you have ideas for systems, but are not fluent enough in the SDQL to run them yourself, you can hire an SDQL expert to translate them in SDQL or you can post the system at the SportsDataBase.com Google Discussion Group.

LOS ANGELES ANGELS

Play On SDQL Trends

LAA 001	The Angels are 19-0 SU with no rest as a road favorite after playing as a home favorite when their opponent's starter has an ERA of higher than 3.75 on the season.	team=Angels and rest=0 and AF and p:HF and o:STDSERA>3.75
LAA 002	The Angels are 15-0 SU on the road after a game as a home favorite in which they did not score after the third inning.	team=Angels and A and p:HF and p:S3=p:runs and date>=20051000
